

I am a UI/UX designer who specializes in creating clean, friendly user interfaces for web, mobile devices and TV. I have over seven years of experience and worked on a broad range of award-winning products.

As a designer who often implements my own work, I have a strong understanding of the constraints of any given project, and I work hard to produce products that both push the creative envelope and are technically feasible.

I have worked in both product-driven and engineering-centric groups. I pride myself on attention to visual detail, creative problem solving and being on the cutting edge of web design trends and practices. I find UI accessibility a form of art.

Our digital lives are rapidly converging through web, video and social networking. I am looking for an opportunity with a forward-thinking startup that will empower me to help create the next generation of online experiences.
